OUTSTANDING ENGINEERING PRODUCED THE DELTA DIFFERENCE.

CHECK THESE FEATURES AGAINST ANY CRAWLER CRANE THIS SIZE OR ANY SIZE!

- Three full-width hoist drums. Each with double brakes, double clutches. Rear drum splits to give you four hoist lines for special rigging needs.
- Smoothest swing for non-sway loads. Closed-loop hydrostatic, piston pump, single or dual drive units.
- A third hand! Modulated clutch controls let you do three functions at once, easily. Swing, hoist and boom, or propel—all at the same time.
- Quiet cab: if you close the door you'll have to check the tach to see if the engine is running. Visibility that lets you see everything.
- Hydrostatic boom hoist with a feathering touch. Puts the boom right where you want it... exactly.
- Propel made for walking—keeps the load under the boompoint, unswaying, even at full counter-rotation.

on the spot. Hydrostatic with two extra booster motors per side for more powerful torque when needed.
- Wide-open machinery accessibility.
- Fast knockdown—modular—move it by truck.

P&H DELTA 5250
NEW 250 TON CRAWLER CRANE

THE DELTA DIFFERENCE MAKES ALL THE DIFFERENCE.

Note: All designs, specifications and components of the equipment described above are subject to change at the manufacturer's sole discretion at any time without notice. Data published herein is intended for general use and shall not be construed to guarantee suitability of the machine for any particular purpose or performance may vary with the conditions encountered. The only warranty applicable is our standard written warranty for this machine. Manufactured and sold in accordance with U.S. Department of Commerce Commercial Standard 6-90-58.
VERSATILITY: THE DELTA DIFFERENCE

Three full-width hoist drums have double brakes, double clutches, and extra high rope capacity (1765° working, 2512° storage). Rear drum may be split for a fourth hoist line for special attachments. This is a Delta Difference that permits adding many standard attachments and special rigging without expensive options or rework.

LIFT CRANE PLUS.
The Delta 5250 is a superb lift crane with high capacities at all radii, offering a long, extra rugged boom, and a super 80 ton (72.6 t) jib. The main boom reaches to 290 feet (88.3 m). Longest boom and jib combination is 200 ft. + 140 ft. (60.96 m + 42.67 m). Widest boom spread = 106 inches (2692 mm).

DELTA-LIFT: THE MULTIPLIER.
The Delta-lift attachment can enhance the load moments of the Delta 5250 from two to more than twelve times the standard lift crane. Boom lengths to 400 feet (122 m) can be erected. The trailing counterweight is independently powered to swing or assist forward travelling with capacity loads. Travelling is smooth, maneuvering easy without any jerking or affecting the stability of the load on the hook. Can be rigged with either a fixed or luffing jib for custom erection jobs.

POWER TOWER.
A patented tower cap mounts the boom on the centerline of the tower, which eliminates the torisional stresses of edge-mounted booms, and yet allows the boom to fold under the tower in the preferred "tucked-in" position during erection. Result: More capacity, more reach.

DUTY CYCLE, TOO.
Extra heavy duty undercarriage and upper frame, plus double brakes and clutches make the Delta 5250 a true universal crane, unique in its class. A second hydraulic swing unit doubles swing torque for continuous, heavy-duty, or clamshell work.

DELTA DIFFERENCE!
